

## **Magnetizer Industrial Technologies appoints Renewed Lighting Solutions as their UAE distributor**

August 02 – 2009

Renewed Lighting Solutions will service the U.A.E. region with its strategically located offices in Dubai, U.A.E.

Considered by experts as the world's finest, most affordable reliable magnetic energizer that easily is installed on any engine, furnace, heater or boiler fuel lines and guarantees to save fuel, boost power and reduce emissions, it also has applications in controlling scale in water and reduces chemical treatment in pools, spas, and industrial water and fluid treatment -

Magnetizer's newest patent is to magnetize refrigeration and air conditioning mixtures. University and field testing have clearly demonstrated a savings in energy consumption while extending the life of the equipment and expanding its capacity with a more efficient transfer of heat.

'The Board of Directors of Magnetizer have chosen very carefully and are very pleased to have the formidable reliability of Mohammed Al Quraishi, CEO and Owner of Renewed Lighting Solutions and of Shatalat Irrigation Services as our representatives in the U.A.E. Their operations and distribution channels have high merit which compliments our lines of consumer and industrial products and shall ensure proper implementation'

states Garrett Shivo, CEO, Magnetizer Industrial Technologies, Inc.

The Magnetizer energizes and polarizes random & clustered fuel molecules changing their electron spin and isomeric hydrogen parahydrogen form to orthohydrogen, giving them an extremely strong positive charge, which organizes their molecular structure - thus ionically attracting oxygen atoms to the hydrocarbon molecule (creating better oxygen bonding and better fuel oxidation) in the combustion chamber of engines, furnaces, heaters, etc., which results in a highly oxygenated hydrocarbon molecule and more complete fuel burning, & as a result: increased combustion efficiency, better performance, cleaner internal engine / furnace / heater parts, and reduced (up to 99%) toxic emissions of carbon monoxide (CO), hydrocarbons (HC) & nitrogen oxides (NOx).

By the same principle the Magnetizer energizes and organizes random & clustered water molecules by applying to them the strongest possible magnetic charge, greater than that of the minerals and the plumbing, thus lowering water surface tension, stabilizing (neutralizing) pH & creating soft water behavior. The magnetizer's unique 'monopole' technology dissolves normally insoluble scale (CaCO<sub>3</sub>), magnesium and other hardness related mineral buildup in pipes - from their stronger, crystal, calcite form to a weaker, softer and slushy, crystalline, aragonite solution which evacuates by itself with water flow in an open system, or can be drained, flushed out or mechanically purged in the closed water circulation as an easily removable slush.

Not only does Magnetizer clean pipes, but also protects them against this harmful scale condition and electrolytic corrosion. It helps to reduce use of chemicals and kills algae and bacteria - yielding lifetime benefits of naturally conditioned, more oxygenated, salt-free, healthier, softer, full of minerals and better tasting water.

'We are pleased to bring this brilliant technology 'Magnetizer' to the U.A.E., this patented state-of-the-art design and exceptionally easy to install product would be most beneficial to the residential, commercial and the industrial sector,' states Mr. Mohammed Al Quraishi, CEO & Owner of Shatalat Irrigation Services and Renewed Lighting Solutions.

The Magnetizer has been installed at major government facilities in the U.S.A., International commercial and industrial facilities (hotels, agriculture, and oil industry) and for private homes.
