

Maguin-Apicc to present a wide range of their products at the 2009 Environment show

January 14 - 2009

Specialised in thermal waste treatment, Maguin-Apicc designs and sells incinerators, offering turnkey solutions for waste elimination and energy recovery.

A wide range of their products will be exhibited at the 2009 Environment show in Abu Dhabi from January 19-21.

Drawing on their vast experience and environmental requirements, this French company has developed a wide range of kilns designed to treat all kinds of waste through thermal processes:

- solid: industrial waste, medical waste, household garbage, slaughterhouse waste, animal-based meal, sludge, pasty waste.
- liquid: solvents, oil residues, animal fats, wastewater streams.
- gaseous: cooker- and dryer-generated vapour and steam, VOC, contaminated air.

Designed to meet the needs of the chemical, petrochemical, pharmaceutical and food industries as well as slaughterhouses, renderers, local and regional authorities, hospitals, supermarket logistics platforms or waste treatment professionals, these turnkey solutions are personalized for each client:

- Stepped kiln
- Static kiln
- Rotary kiln
- fuel or gas
- automatic ash loading/unloading
- post-combustion chamber
- waste-to-energy incineration system (hot water or vapour)
- options for treating flue gas to comply with local norms: dry neutralization process filtration or wet combination quench/scrubber system; catalytic or non-catalytic NOx).

These highly effective systems provide global, reliable and economic responses to a host of environment-related issues: volume reduction, eliminating environmental nuisance by optimising clinker and flue gas quality, recycling recovered waste or even recovering energy by producing steam, hot water, hot air, electricity or cold.

Manguin-Apicc guides its customers through every step of their project: from the design stage through trials, manufacture, assembly, start-up, training and technical assistance, all the way to facility maintenance and rehabilitation.

This French company is also specialised in industrial processes and equipment for beetroot sugar factories, the drying and sifting of organic and mineral products, as well as alcohol and ethanol fuel. Today, Manguin-Apicc provides services to customers around the world: Algeria, Saudi Arabia, Canada, Cameroon, China, Egypt, France, Lebanon, Libya, Madagascar,

Mauritania, Morocco, Rumania, United Kingdom, Senegal, Switzerland, Tanzania, Tunisia, Yemen.
